SPECTRE CHEST RIG MOLLE

MODEL DESCRIPTIONS

The structure of this Chest Rig MOLLE is entirely constructed by using Cordura 1000D.

Designed and developed to be used as a main structure for carrying the combat load, this chest rig is very comfortable and versatile thanks to its special configuration.

The entire front surface is MOLLE compatible. On the sides there are 2 low-profile pockets, perfect for transporting radio apparatus and the back-up weapon. At the front is a comfortable standard admin pocket with all the interfaces suitable for containing admin materials and back-up accessories.

A practical crystal pocket can contain navigation maps in an optimum position for a rapid consultation.

The part that adheres to the body is made of practical and highly technical airtex that creates a large pocket along the entire structure. This pocket is excellent for containing back-up materials thanks also to the several compartments and elasticated sections inside it.

The comfortable X shaped shoulder straps are flat and padded with airtex; on the upper side they are provided with several MOLLE compatible eyelets and with elasticized eyelets for retaining the cables of the electronic apparatus.

This Chest Rig is already set for receiving our Assault Pack and FAST Assault Pack directly on the structure of the Chest Ring itself.
